DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to a device for compensating for pressure drop in a pipe, classified in class 138, subclass 119.
 - II. Claims 9-11, drawn to a system for filling containers, classified in class141, subclass unknown.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions of Groups I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, wherein the invention of Group I does not require a device positioned upstream of a filling station arranged at an angle of the horizontal plane, as is required by the invention of Group II.
- 3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
- 4. During a telephone conversation with Applicant's attorney, **Mr. Ronald**Santucci on Monday, September 19, 2005 a provisional election was made without

Application/Control Number: 10/520,086 Page 3

Art Unit: 3754

traverse to prosecute the invention of Group I, claims 1-8. Affirmation of this election must be made by applicant in replying to this Office action. Claims 9-11 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. 3,364,632 to Isaac.

The patent to **Isaac** discloses a collapsible tube including a limiting means, which is inelastic in the circumferential direction and is adapted to counteract stretching of the tube in the circumferential direction, and which is flexible, as shown in figs. 1, 3, 5 and 7, such that it is collapsible freely together with the tube portion, as recited in claim 1. Figs. 3 and 4 disclose the limiting means (12) being embedded within the walls, as recited in claims 2 and 3, while figs. 7 and 8 shown the limiting means arranged on the outside portion of the tube, as recited in claim 4. The limiting means is disclosed as being formed of steel or fiberglass and is capable of carrying

tensile, compressive, or flexural loads. Limiting means formed of those materials will inherently prevent stretching in the circumferential direction at a pressure in the range of 1-10 bar, as recited in claim 5.

Page 4

Allowable Subject Matter

6. Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Williamson, Jr., Baird '736 and '354, Lewis, Many, Korejwa, Huthsing, Skinner, Feucht, Evans et al. are pertinent to Applicant's invention in disclosing flexible hoses including reinforcements provided therein or onto the flexible wall, the hoses still having the flexibility to collapse into a flat position.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Patrick F. Brinson** whose telephone number is (571) 272-4897. The examiner can normally be reached on M-F 7:30-3:00.

Art Unit: 3754

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Michael Y. Mar** can be reached on (571) 272-4906. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
